

GSN Community Setup Pack: GSN Core Capabilities (2026-09-14)

Document date: 2026-09-14

Pack: GSN Community Setup Pack

Authenticity mark: GSN Original Community Setup Material | Source-controlled in gmfn_mvp/docs | Document date: 2026-09-14

Purpose

This document replaces the old public habit of presenting GSN as a fixed-number capability list.

Use GSN Core Capabilities for public-facing app surfaces, executive summaries, first conversations, and ordinary client/member explanation. The larger `GSN in Real Life` bank remains the controlled setup source for deeper rollout, audience selection, upgrades, operator work and Strategic Application Lenses.

Devil truth: this list explains durable product value. It is not a promise that every capability is live for every client, and it does not expose every internal module GSN can use.

Core Capabilities

1. Recognised Community Identity

GSN gives a real group a governed identity beyond WhatsApp names, paper lists and one person's phone.

2. Governed Membership and Roles

GSN separates leaders, admins, members, visitors and public readers so access follows responsibility.

3. Invite and QR Entry

GSN helps people enter the correct community, document, shop or setup flow without typing links manually.

4. Official Announcements and Response Evidence

GSN keeps official notices, acknowledgement, availability and follow-up evidence from being buried in chat noise.

5. Meetings, Attendance and Decision Memory

GSN connects meetings, attendance, decisions, files, action owners and handover memory into one readable trail.

6. TrustPassport and TrustSlip Evidence

GSN lets members carry bounded identity and trust evidence without pretending trust is automatic proof.

7. Community Marketplace and Public Shop

GSN gives shops, services, products, media, Spotlight, contacts and verification entry points one organised public home.

8. DemandBox and Ask Community

GSN routes needs, offers, requests and local demand into a structured lane while keeping official bulletin space protected.

9. Support, Welfare and Contribution Records

GSN makes welfare, support, contribution, repayment and responsibility records easier to review without turning GSN into a bank.

10. Opportunity and Activity Analytics

GSN helps leaders read attention, demand, participation, Spotlight movement, shop activity and opportunity signals without mistaking signals for proof.

11. Documents, Downloads and Bridges

GSN packages setup papers, QR download sheets, public links, private files and approved bridges so people receive the right material.

12. Continuity, Handover and Institutional Memory

GSN keeps community identity, roles, documents, decisions, evidence, setup history and handover usable after leaders or devices change.

Audience Use

Use the full core set for GSN positioning and app surfaces. For client distribution, choose only the few that fit the organisation:

- Churches and faith groups: identity, membership, announcements, meetings, welfare, documents and handover.
- Schools and youth groups: identity, roles, QR entry, announcements, attendance, documents and handover.
- NGOs and charities: identity, roles, announcements, project memory, support records, documents and analytics.
- Cooperatives, markets and business networks: identity, roles, marketplace/shop, DemandBox, support records, analytics and continuity.
- Families, diaspora groups and associations: identity, roles, QR entry, trust evidence, support records, documents and handover.

Controlled Full Bank

The expanded `GSN in Real Life` bank preserves the 44 original modules and adds Strategic Application Lenses, but it should not be the default public front.

Use the full bank only when:

- the setup team is designing a rollout
- a client leader needs the deeper map
- an audience-specific copy must be prepared
- an upgrade changes the setup pack
- due diligence requires a fuller explanation

Do not send the full bank to ordinary members when a smaller audience copy is enough.
